

**PROPEL**<sup>TM</sup> **AIR**  
PLATFORM

**OPEN UP. TRAIN YOUR PUP.**

WANT TO HELP  
YOUR DOG BUILD  
**BALANCE,**  
**AGILITY,**  
AND **STRENGTH?**

**PROPEL™ AIR PLATFORM**

**Fully Inflatable and Connectable  
Training Platform for Dogs**

Take your dog's training to new heights with the first connective inflatable training platform made in the USA. Patent Pending.

**SAFE**

FDA Compliant (food-grade), enhanced antimicrobial performance and free of latex, lead, BPA and phthalate.

**STURDY**

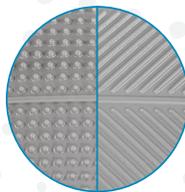

UV-resistant for outdoor use, scratch and stain resistant, and maintains traction when wet.

**SUSTAINABLE**

Fully recyclable and manufactured with as little environmental impact as possible.

## PLATFORM INFLATION LEVELS

- 1 An underinflated Propel Platform can be used to cradle an over-inflated Propel Platform.
- 2 The neutral inflation level is great when first introducing the Propel Platform to your dog.
- 3 The overinflated Propel Platform can be used to increase the challenge level for fit and confident dogs.

The Propel Air Platform features **two unique surfaces** to work on, including a raised bubble side to stimulate neuroreceptors and aid in proprioception as well as a lower profile lined side for sensitive paws.

## HOW TO ACHIEVE PROPER FORM WHEN USING THE PROPEL PLATFORM

Proper form is imperative in any good conditioning program. Without proper form, some exercises can do more harm than good. Recognizing improper form takes time and a well-trained eye.

Designed with user friendly **Pro-Gridlines** to help with proper form and paw placement no matter the size or ability of your dog!

Try achieving the following postures with your dog on the Propel Air Platform before progressing to other exercises.

### NEUTRAL TOPLINE

No twisting of the spine - Head is level or appropriate for exercise.

### FRONT AND REAR LIMBS

Legs under hips/ shoulders a natural distance apart - Hocks are perpendicular to the ground. When performing fitness exercises, your dog's forelimb and rear limbs should be a natural width apart, both from left to right and front to back.

### WEIGHT

Evenly distributed left to right.

## EXERCISE 1

Stand with forelimbs elevated.

## EXERCISE 2

Stand with rear limbs elevated.

## EXERCISE 3

With one under inflated Propel Air Platform, and one neutral to over inflated Propel Air Platform, stand with forelimbs elevated.

## EXERCISE 4

Create a T-Shape with two(2) Propel Air Platforms. Rear limbs should be on the narrow surface, with forelimbs on the wider surface area.

## EXERCISE 5

With two(2) Propel Air Platforms set parallel to each other, an appropriate distance apart, stand with rear limbs on one and forelimbs on the other.

## EXERCISE 6

With the KLIMB set at an angle, and two legs installed on the top to support the Propel Air Platform, practice rear limb targeting.
